

# MBS TOOLS

A SUITE OF ENHANCEMENTS FOR AutoCAD TO  
AUTOMATE LABORIOUS ROUTINES

MBS are an independent software company with a strong surveying background who have been providing professional survey firms with specialist software for more than 15 years. All our software is offered on a licensed basis which allows for continual development. Most of this development is driven by our users who are clearly best placed to determine what is required to help them work more efficiently.

MBS Tools forms one part of the MBS Building software package. It is by far and away our flagship product, having been on the market since 1997, with over 300 licenses throughout the UK and Ireland, and with an ever increasing number in Australia, New Zealand and Canada.

MBS Tools software offers several routines to assist the surveyor in the repetitive "Michelangelo" tasks for the presentation of final drawings.

They are the product of user requests over many years. The Tools have been written within AutoCAD's programming language, with all versions supported from the current version back three generations.

MBS Doors & MBS Windows are just two of the routines available - they both allow automatic trimming and positioning of the respective blocks as one AutoCAD command throughout the entire drawing. Manual trimming is otherwise a laborious, time consuming exercise.

MBS Tools offer huge office time savings.

Please contact David Maltby to discuss your individual requirements
